

**IN THE CLAIMS:**

The text of all pending claims are set forth below. Cancelled and withdrawn claims are indicated with claim number and status only. The claims as listed below show added text with underlining and deleted text with ~~strike through~~. The status of each claim is indicated with one of (original), (currently amended), (previously amended), (cancelled), (withdrawn), or (new).

Please AMEND the claims in accordance with the following:

1. (Currently Amended) An information processing apparatus having a bookmark registration function for ~~registering a user to register~~ a home page which is being inspected by the user, comprising:
  - a keyword extracting section ~~which extracts~~ configured to automatically analyze contents of a registering home page to thereby identify and extract keywords from the contents of a the registering home page which is to be registered; and
  - a title adding section ~~which creates~~ configured to automatically create a new title of the registering home page from the extracted keywords, and ~~adding~~ configured to automatically add the title to the user's bookmark registration of the registering home page.
2. (Currently Amended) The information processing apparatus as claimed in claim 1, further comprising:
  - an image creating section ~~which creates~~ configured to create a thumbnail of a display image of the registering home page in its ~~entirely~~ entirety.
3. (Currently Amended) The information processing apparatus as claimed in claim 1, further comprising:
  - a summarizing section ~~which creates~~ configured to automatically create a summary of the contents of the registering home page from the contents of the registering home page.
4. (Currently Amended) The information processing apparatus as claimed in claim 1, further comprising:

a list creating section ~~which creates~~ configured to create a list of URLs of linking destinations included in the registering home page.

5. (Currently Amended) The information processing apparatus as claimed in claim 1, further comprising:

a page analyzing section ~~which analyzes~~ configured to analyze an inspection record of home pages to obtain an analyzed result, and ~~outputs~~ to output information of a home page which is being inspected with a display order or display format dependent on the analyzed result.

6. (Currently Amended) The information processing apparatus as claimed in claim 1, further comprising:

~~a an~~ HTML creating section ~~which creates a~~ configured to create an HTML file and ~~outputs~~ output the HTML file when starting a browser, so as to output a home page having a high inspection frequency with a priority over others based on an inspection record of home pages.

7. (Currently Amended) The information processing apparatus as claimed in claim 1, further comprising:

a scrap information storage ~~which stores~~ configured to store an arbitrary specified portion of the registering home page.

8. (Currently Amended) A volatile or non-volatile computer-readable storage medium which stores a program for causing a computer to realize a bookmark registration function for ~~registering a user to register~~ a home page which is being inspected by the user, said program comprising:

a procedure causing the computer to automatically analyze contents of a registering home page to identify and extract keywords from the contents of a the registering home page which is to be registered; and

a procedure causing the computer to automatically create a new title of the registering home page from the extracted keywords, and to automatically add the title to the user's bookmark registration of the registering home page.

9. (Currently Amended) The computer-readable storage medium as claimed in claim 8, wherein said program further comprises a procedure causing the computer to create a thumbnail of a display image of the registering home page in its ~~entirely~~ entirety.

10. (Currently Amended) The computer-readable storage medium as claimed in claim 8, wherein said program further comprises a procedure causing the computer to automatically create a summary of the contents of the registering home page from the contents of the registering home page.

11. (Original) The computer-readable storage medium as claimed in claim 8, wherein said program further comprises a procedure causing the computer to create a list of URLs of linking destinations included in the registering home page.

12. (Currently Amended) An information processing apparatus comprising:  
a keyword extracting section ~~extracting~~ configured to automatically analyze contents of a registering home page to thereby identify and extract keywords from the contents of a ~~the~~ home page; and  
a title creating section ~~creating~~ configured to automatically create new title information of the home page using the extracted keywords.

13. (Currently Amended) A volatile or non-volatile computer-readable storage medium which stores a program for causing a computer to realize ~~the processes of a process~~ comprising:  
automatically analyzing contents of a registering home page to thereby identify and extract ~~extracting~~ keywords from contents of a home page; and  
automatically creating new title information of the home page using the extracted keywords.

14. (Currently Amended) An information processing method for ~~registering a user to~~ register a home page which is being inspected by the user, comprising ~~the steps of~~:

~~(a) — automatically analyzing contents of a registering home page to thereby identify and extract~~ extracting keywords from contents of a registering home page which is to be registered; and

~~(b) — automatically~~ creating a new title of the registering home page from the extracted keywords, and automatically adding the title to the user's bookmark registration of the registering home page.

15. (Currently Amended) The information processing method as claimed in claim 14, further comprising ~~the step of~~:

~~(c) —~~ creating a thumbnail of a display image of the registering home page in its ~~entirely~~ entirety.

16. (Currently Amended) The information processing method as claimed in claim 14, further comprising ~~the step of~~:

~~(c) —~~ automatically creating a summary of the contents of the registering home page from the contents of the registering home page.

17. (Currently Amended) The information processing method as claimed in claim 14, further comprising ~~the step of~~:

~~(c) —~~ creating a list of URLs of linking destinations included in the registering home page.

18. (Currently Amended) An information processing method comprising ~~the steps of~~:

~~(a) — automatically analyzing contents of a registering home page to thereby identify and extract~~ extracting keywords from contents of a home page; and

~~(b) —~~ automatically creating new title information of the home page using the extracted keywords.

19. (New) A method of registering bookmarks at a user terminal used to select, load, and display pages, the method comprising:

at the user terminal, selecting a page by a user, in response downloading the page from

a server to the terminal, and in response displaying the page on the terminal, where the page comprises content;

at the user terminal, receiving a command from the user to bookmark the page;

based on the command, at the user terminal automatically extracting keywords from the contents of the page and using the keywords to create a new bookmark registration for the page.
